Visions of Clouds and Cloud Security

What is the "Cloud"?

- > PAAS
- > SAAS
- > IAAS

Chris Hoff's Model of the Cloud

Cloud Security Alliance's 15 Domains

We will focus on IAAS

- Virtualization is the Basis
- > Basic Virtualization Overview

What is the private cloud?

- > Internal Cloud
- > External Cloud
- > Internal Cloud + External Cloud = Private Cloud
- > Benefits of the Private Cloud
- > Limitations of the Private Cloud

Cloud Security Reference Architecture

What is the Cloud?

"X as a Service" Types of Clouds

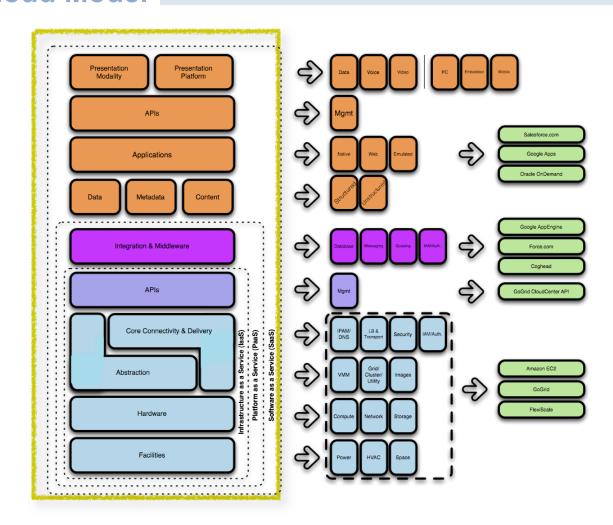

- Software as a Service (SaaS)
 - Salesforce.com
 - Google Apps
- > Platform as a Service (PaaS)
 - Google App Engine
 - Force.com
- Infrastucture as a Service (laaS)
 - Amazon EC2
 - Rackspace
 - Savvis

Security Considerations of Each Type of Cloud

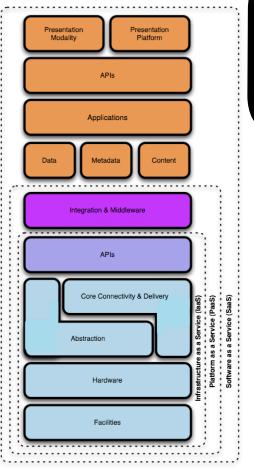

- Software (SaaS)
 - Least extensibility and greatest amount of security responsibility taken on by the cloud provider
- Infrastructure (laaS)
 - Greatest extensibility and least amount of security responsibility taken on by the cloud provider
- > Platform (PaaS)
 - Lies somewhere in the middle, with extensibility and security features which must be leveraged by the customer

Cloud Model

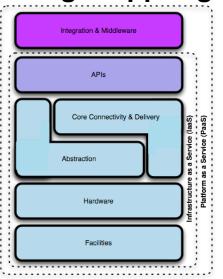

What This Means To Security

Salesforce - SaaS

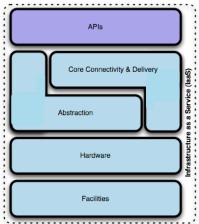

The lower down the stack the Cloud provider stops, the more security **you** are tactically responsible for implementing & managing yourself.

Google AppEngine - PaaS

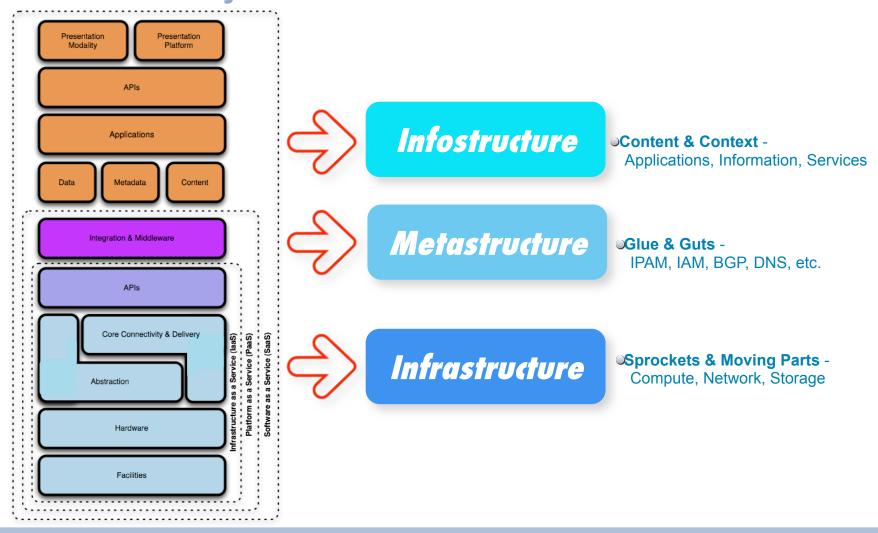

Amazon EC2 - laaS

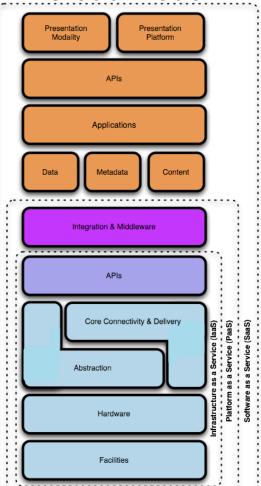

Cloudanatomy

Mapping the Model to the Metal

Cloud Model

Find the Gaps!

Security Control Model

Applications SDLC, Binary Analysis, Scanners, WebApp Firewalls, Transactional Sec.

DLP, CMF, Database Activity Monitoring, Encryption

Management GRC, IAM, VA/VM, Patch Management, Configuration Management, Monitoring

NIDS/NIPS, Firewalls, DPI, Anti-DDoS, QoS, DNSSEC, OAuth

Trusted Computing Hardware & Software RoT & API's

Compute & Storage Host-based Firewalls, HIDS/HIPS, Integrity & File/log Management, Encryption, Masking

Physical Plant Security, CCTV, Guards

Compliance Model

PCI

- Firewalls
- Code Review
- **W**AF
- Encryption
- Unique User IDs
- ☑ Anti-Virus
- Monitoring/IDS/IPS
- ☑ Patch/Vulnerability Management
- Physical Access Control
- Two-Factor Authentication...

HIPAA

GLBA

SOX

Cloud Security Alliance's 15 Domains of Cloud Computing

- 1. Cloud Computing Architectural Framework
- 2. Governance and Enterprise Risk Management
- 3. Legal
- 4. Electronic Discovery
- 5. Compliance and Audit
- 6. Information Lifecycle Management
- 7. Portability and Interoperability
- 8. Traditional Security, Business Continuity and Disaster Recovery
- 9. Data Center Operations
- 10. Incident Response, Notification, Remediation
- 11. Application Security
- 12. Encryption and Key Management
- 13. Identity and Access Management
- 14. Storage
- 15. Virtualization

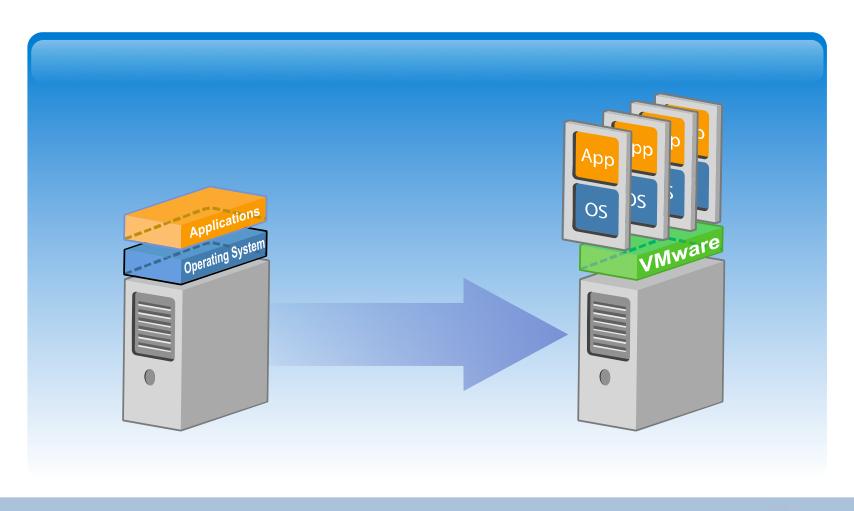

Infrastructure as a Service

Hardware Virtualization is the basis of the laaS Model Examples include:

- > VMware vSphere
- > MS HyperV
- > Citrix XenServer

Benefits of the Private Cloud

What are the benefits of a private cloud?

- > Expand scalability
- > Lower infrastructure
- Increase utilization
- Improve end-user productivity
- > Improve reliability
- > Increase security
- Sain access to more sophisticated applications
- Downsize the IT department
- > Save energy

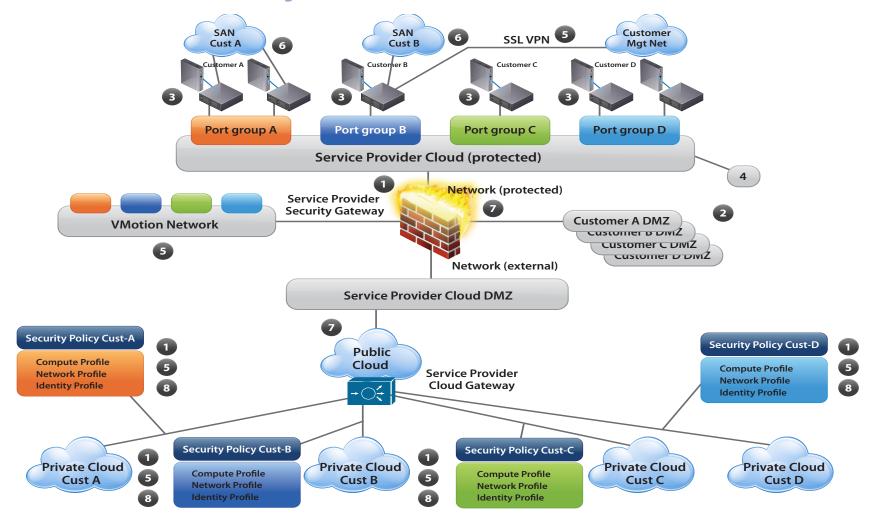

Limitations of the Private Cloud

Limitations of Existing Cloud Computing Solutions

- > A lack of interoperability
- > Application Compatibility
- > Difficulty in meeting compliance regulations
- > Inadequate security

Cloud Security Reference Architecture

Cloud Security Reference Architecture

- 1. Security profile per compute profile
- 2. Security DMZ per vApp
- 3. OS Management
- 4. Resource Management
- 5. Security profile per network
- 6. Data Security
- 7. Security Authentication, Authorization, and Auditing
- 8. Identity Management
